DETAILED ACTION

1. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

the phrase "bowl-like" (cl 1, ln 3) is indefinite because the scope of the phrase is unascertainable.

the phrase "the excess thermoplastic resin composition" (cl 1, lns 12-13) lacks antecedent basis in the claim.

The phrase "to form a cover... with remained thermoplastic resin composition" (cl 1,lns 13-15) is confusing because it is idiomatically incorrect.

Clarification and/or correction is required.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 3. Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Morgan (USPN 6468381). Morgan teaches the claimed process as evidenced by col 10, Ins 38-44 and figs 3-4. It should be noted that the claimed phrase "top part" is relative, thus the portion of the shell of Morgan within the groove and channel of Morgan constitutes the top part of the shell.

Application/Control Number: 10/712,046 Page 3

Art Unit: 1732 -

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 2-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morgan (USPN 6468381). The above teachings of Morgan are incorporated hereinafter. Morgan, however, does not teach the claimed thickness difference; the claimed volume of the two half shells; and the claimed compression pressure. In regard to the claimed thickness difference, such is a mere obvious matter of choice dependent on the desired final product and of little patentable consequence to the claimed process since it is not a manipulative feature or step of the claimed process. Further, the claimed thickness difference is well-known in the molding art. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to set the thickness difference of Morgan within the claimed range in order to form a high quality golf ball. In regard to the claimed volume of the two half shells, such is well-known in the molding art in order to ensure proper filling of mold. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to set the volume of the two shells within the claimed range in order to ensure that the molds of Morgan are filled. In regard to the claimed compression pressure, such is well-known in the molding art and it would have been determined through routine experimentation since compression pressure is a result effective variable. Thus, it would have been

Art Unit: 1732

obvious to one of ordinary skill in the art at the time the invention was made to compress the shells of Morgan at the claimed pressure in order to ensure proper molding of the layer.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to EDMUND H. LEE whose telephone number is 571.272.1204. The examiner can normally be reached on MONDAY-THURSDAY FROM 9AM-4PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Colaianni can be reached on 571.272.1196. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
